

GlobalStroke: the community for Stroke specialists

GlobalStroke.net is an International initiative lead by the Director of Stroke Telemedicine for Arizona, Dr. Bart Demaerschalk, a member of the Divisions of Cerebrovascular Diseases and Critical Care Neurology, Department of Neurology, Mayo Clinic. The aim of this project is to create the First International Stroke Network which will provide:

- access to a worldwide network of stroke specialists,
- second opinion diagnoses
- knowledge-based platform with clinical cases for research and e-learning purposes

Project Summary

Objectives

- Creation of the First International Stroke Network for second opinion and knowledge sharing
- The aim is global and ambitious

Products

- GlobalStroke initiative uses Medting Enterprise as a web platform to concentrate all the medical cases and images related to stroke cases

Features

- Web-based medical image repository
- One-click image capture and upload
- Automatic deletion of patient personal data
- Instantaneous multi-language translation
- Integrated DICOM image viewer
- Video player
- SNOMED tag system for classification of contents
- Content search engine
- Easy display of cases in external sites and blogs via code-based connectors

Benefits

- Second-opinion workflow optimization
- Website integration, personalization, white label
- Information security
- Patient privacy

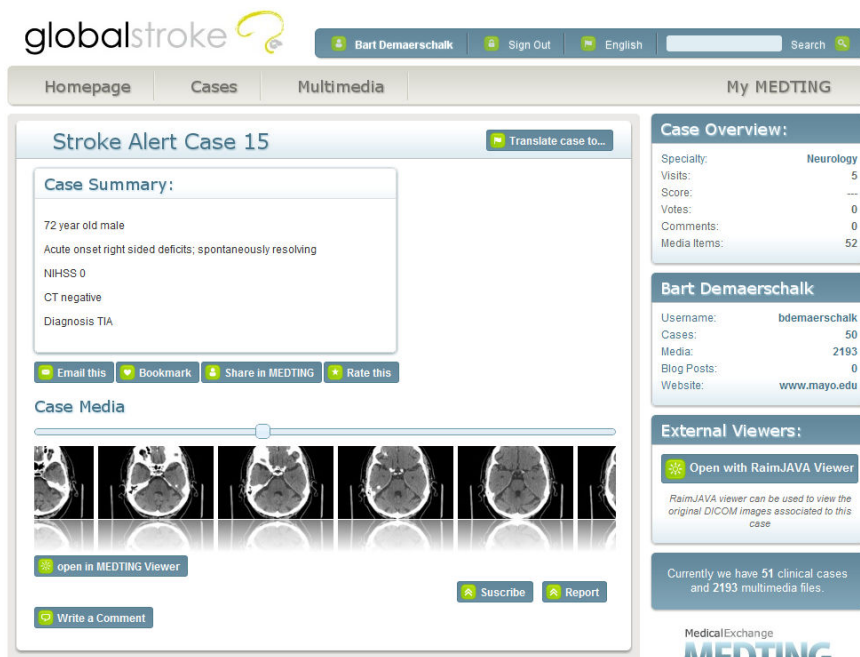

About GlobalStroke.net

GlobalStroke.net is a international collaboration initiative which aims to create a collaborative international network of stroke specialists worldwide to share second opinions and knowledge about the topic. Project leader is :

Bart M. Demaerschalk, MD, MSc, FRCP(C)
Professor of Neurology
Director, Cerebrovascular Diseases Center
Director, Stroke Telemedicine
Department of Neurology
Mayo Clinic Hospital
Phoenix, Arizona

More Information at:

GlobalStroke has incorporated MEDTING Enterprise. MEDTING provides a powerful Web-based clinical multimedia management platform and second opinion collaboration network.

“Thanks to MEDTING we have been afforded a marvelous opportunity to create an international collaborative network for stroke specialists to share knowledge and second opinion. Stroke is global, and therefore, collaboration between stroke specialists should be Global”

Dr. Bart Demaerschalk. Professor of Neurology, Mayo Clinic

Create your own medical social network

Use MEDTING to create your own knowledge platform or collaboration site

The Power of Collective Wisdom

Medical Societies, Associations, Clinical and Research Workgroups traditionally develop websites as a reference place for members. Some of them incorporate a wiki or blog technology.

MEDTING Platform can be easily integrated into any website and allow a group of users to build a powerful clinical data repository that can provide great benefit to the taskforce. The storage of these images and videos coupled with case comments offers clinical professionals very valuable educational and reference tools that can positively impact the quality of patient care.

MEDTING functionality and content can be smoothly integrated into any website as a **white label** platform.

info@medting.com

Easy and accurate exchange of medical content can be done privately, globally and immediately.

Clinical or research groups can also use the MEDTING technology and connectors to create customized content focused on one particular disease process.

MEDTING is the perfect platform for:

- Creating a teaching and academic repository directly from clinical daily activity.
- Connect doctors, residents and students into a social web platform accessible from an Intranet.
- Telemedicine: Share cases to obtain second opinions and receive cases to review.
- Create an educational repository for use in Accreditation and Training Certification.
- Online Clinical Sessions: MEDTING facilitates online Virtual Meetings by using any integrated Video-Conferencing, Chat and Collaboration platforms.

How Medting can help your organization?:

Healthcare organizations including hospitals, medical schools, medical services companies, clinical workgroups and medical societies can obtain their own private and exclusively MEDTING Enterprise platform to have:

- Complete control over your own, private MEDTING
- Content published only for your physicians
- Images uploaded from your PACS
- Creation of a private teaching repository
- Connect your doctors, students, even patients privately and exclusively

MEDTING software can be licensed to any interested organization and installed in their data center (behind the firewall). MEDTING also provides hosting services on a Software as a Service base (SaaS).
