ASBMT Clinical Case Forum Participants

Stephanie Lee, MD

*Member of Fred Hutchinson Cancer Research Center;
Professor of Medicine, University of Washington Medical Center*

“The true strength of this website is how much information you can provide including the case, images, radiographs and anything else that is pertinent to get the best advice possible on a difficult case. You also have a record of what people thought and can refer back to it. People can see what other clinicians have said and comment on their comments. It’s a very interactive process.”

“very
interactive
process”

Miguel-Angel Perales, MD

Deputy Chief, Adult Bone Marrow Transplant Service; Director, Adult Bone Marrow Transplantation Fellowship Program, Memorial Sloan Kettering Cancer Center

“Over the years I’ve established my own informal collaboration network. By having the ASBMT Forum, we can expand past our one-on-one discussions that only benefit two people, and now an entire transplantation community can benefit, too.”

“expand past
our one on one
discussions”

Linda J. Burns, MD

*Professor of Medicine, Adult Blood and Marrow Transplant Program,
University of Minnesota*

“I believe the online forum will make it easier to collaborate and discuss cases with colleagues. Often we try to review a difficult case on a conference call and cannot show others the images, such as a scan of a patient’s lungs or a picture of a skin rash for which you are trying to determine the etiology. This is a multimedia platform that allows us to quickly look at a variety of images, ask questions back and forth at any time, day or night, and engage a variety of care providers that are not only physicians, but multiple members of care teams.”

“easier to
collaborate”

Mark R. Litzow, MD

*Professor of Medicine and Chair, Myeloid Disease Group,
Division of Hematology, Mayo Clinic*

“Input from colleagues helped guide me to the most appropriate decision-making in an unusual case of late molecular progression of chronic myeloid leukemia after allogeneic BMT when I was uncertain how to proceed.”

“colleagues
helped
guide me”

Melissa Cochran, BSN, MS, ARNP

*Stem Cell Transplant Program,
Dana Farber Cancer Institute*

“I had a very positive experience. We have difficult cases that I am involved in. I appreciated the references that Dr. Perales posted and the other practical suggestions that were provided by others. It was nice to get an outside perspective and think about what questions come up. I didn’t really think about who was exactly commenting on my case, but I really was appreciative of the thoughts, input and references. The site is user-friendly and intuitive. I was able to click around easily and find where I was going. Anyone will be fine to navigate the site.”

“user-friendly
and intuitive”

Bill Wood, MD, MPH

*Bone Marrow and Stem Cell Transplantation Program,
University of North Carolina at Chapel Hill*

“The value in this type of platform is that physicians can collaborate on challenging cases with multiple colleagues across institutions and even countries in an open, transparent and nearly real-time way. I think that online, virtual clinical case sharing will stimulate important conversations in the field and will lead to improved outcomes for patients.”

“improved
outcomes for
patients”
